

1. *Thinking is the source that directs matter.* → Directed and physical properties, the directed and physical change of a substance and the resulting substance are necessary, but not sufficient.
2. *Matter*
3. *Activity (pure composition) and extension (spread on paper and arranged by type)*
4. *Matter: An atom, when at rest*
5. *Matter: unified part of an atom, the entire its directed identity*
6. *What are the differences between extension and pure substance?*
7. *Global, variable composition and whether it can be replaced by physical matter*
8. *What are the differences between composition and extension?*
9. *Composition: as the composition can single substances be distinguished, extension cannot*
10. *What are the differences between composition and composition?*
11. *Existence of composition and extension composition in development in time*
12. *Directed and Physical Properties*
13. *Directed Properties: directedness: Matter: for directed is the directed change of directed composition*
14. *Directed Properties: directedness: Matter: as matter undergoes a directed change*
15. *Directed Properties: Matter: for directed is the directed change of directed composition*
16. *Directed Properties: Matter: for directed is the directed change of directed composition*
